How to use this guide

This manual documents how NUVORA actually behaves — every rule quoted (join windows, enrolment expiry, escrow release, payout cadence) is the platform's real behaviour, not marketing prose. Where something is decided by staff policy rather than software, we say so and point you to support.

Fastest answer, any time: open the chat bubble on any NUVORA screen and ask — the assistant answers from this same rulebook and can hand you to a human. Email: support@nuvora.com.

New here? Read in this order

Everyone: chapter 1 (What NUVORA is) → chapter 2 (Accounts & sign-in). Then your role chapter:
Parents chapter 3 · **Learners** chapter 4 · **Tutors** chapter 5. Money questions are all in **chapter 8**.
Something broken? **Chapter 15, Troubleshooting**.

What NUVORA is (and how it works)

NUVORA is a **curriculum-governed tutoring marketplace and virtual school**. It is not an open "anyone-teaches-anyone" board: tutors pass staged vetting (subject assessments, document checks, interview, approval) before they teach, and everything learners study is organised around real curricula and real exams.

Four ways to learn

Live cohorts

Scheduled group classes with fixed enrolment windows, a vetted tutor, lessons, assignments, attendance and exams. The flagship experience.

Private tuition

Request one-to-one tutoring; the team matches you with a vetted tutor, then you book a package.

Home tutors

In-person tutoring in supported areas — the same request → match → teach pipeline as private tuition.

Exam prep

Structured preparation programmes plus timed, CBT-style practice exams marked by the platform, not your device.

Curricula & exams covered

Nigerian curriculum

British curriculum

UTME (JAMB)

WASSCE (WAEC)

SSCE (NECO)

IGCSE

A-Level

SAT

GRE prep

GMAT prep

Programmes map each subject to its curriculum and level, and exam prep tracks follow each exam's published structure and timing — so practice conditions feel like the real hall.

What makes NUVORA different

- ✓ **Vetted tutors only** — subject assessments, ID and credential checks, an interview, and a staff decision before anyone teaches.
- ✓ **Escrowed payments** — money is held until learning is delivered, with an automatic release if a completion goes unconfirmed.
- ✓ **Structured like a school** — curricula, cohorts, attendance, assignments, progress reports and certificates, not loose video calls.
- ✓ **Built for the exams that matter here** — JAMB, WAEC and NECO are first-class tracks alongside IGCSE, A-Level and SAT.
- ✓ **Designed for minors** — learners under 17 are linked to a parent, and messaging only happens inside bookings.

What NUVORA is not

- Not an open marketplace where anyone can list a class.
- Not an AI tutor — the in-app AI handles *support* questions only; all teaching is by vetted humans.
- Not a content dump of videos — video lessons exist, but inside a governed learning structure.

The idea that makes NUVORA safe to pay for

Your money never goes straight to a tutor. It sits in escrow while teaching happens, and releases on delivery — automatically after about **72 hours** if a completion goes unconfirmed. The full money story is in **chapter 8**.

Where you can use NUVORA

Surface	Best for
Web — nuvora.com	Browsing the catalogue, checkout & payment, receipts, tutor vetting applications, the staff console — anything detailed.
Mobile app — Android & iOS	Daily learning: dashboards, joining lessons, messages, push notifications, practice exams, downloads for offline viewing. Purchases open the secure web checkout and drop you back in the app.

One account everywhere

The same sign-in works on web and mobile. Notifications, messages, learners and progress stay in perfect sync.

2.1 — Roles: one account, one or more hats

Role	Who it's for	What you can do
PARENT	Parents & guardians	Add and manage learners, enrol them, pay, message tutors, track progress, earn referral rewards
STUDENT (learner)	The person learning	Join lessons, submit assignments, sit practice exams, message within bookings
TUTOR	Teachers	Apply, pass vetting, teach, mark work, earn and receive weekly payouts
INSTITUTION_ADMIN	Schools & companies	Manage an organisation account and its members
Staff roles	NUVORA team only	The operations console — granted by the business, never self-assignable ; enforced by the platform itself

Choosing & changing your role

You pick a starting role at sign-up (Parent, Student, or Become a tutor) and can change or add roles later yourself — a tutor can also be a parent. Staff access can never be granted from the account screen.

2.2 — Learners under 17

A learner **under 17 must be linked to a parent or guardian** to enrol. Parents create and manage learner profiles from their dashboard and oversee messaging and payments. See **chapter 10, Safety & safeguarding**.

2.3 — Create your account

- 1 Open Sign up** — on the web homepage choose **Create account**, or in the app tap **Create account**.
- 2 Enter your details** and choose your role.
- 3 Verify your email** — a code/link arrives by email. Until verified, your account is *pending* and sign-in asks you to verify first.
- 4 Finish onboarding** — profile → learners → goals. About two minutes, and it powers your recommendations.

Verification email didn't arrive?

Check spam, then use **Resend verification**. If email delivery fails during sign-up, the flow lets you continue and verify shortly after — you won't lose your place. Still stuck? See **chapter 15**.

2.4 — Three ways to sign in

Method	How it behaves
Email + password	Standard. Repeated wrong attempts trigger a temporary lockout plus rate limiting — that protection is intentional, wait a few minutes.
Email code (password-free)	Choose <i>Email me a sign-in code</i> . Entering it also proves email ownership and activates a pending account.
Google	One-tap Google sign-in on web and mobile.

2.5 — Passwords, sessions & account state

- **Password rules:** minimum 8 characters, at least one letter and one digit.
- **Forgot password:** request a reset code from the login page and set a new one.
- **Sessions** stay signed in for up to 30 days and refresh as you use the app. Mobile sessions live in the device keychain.
- **Changing your password signs out every session everywhere** — the right first move if you ever spot access you don't recognise.
- **Account states:** pending (unverified) → active. Staff can suspend accounts for policy breaches, which blocks sign-in while preserving records.

Your parent dashboard is the control centre: learners, orders, lessons, payments, messages, referrals, certificates. Web and mobile show the same truth.

Watch progress as it happens: lessons, attendance, grades and reports in one place.

3.1 — Add a learner

Account → Learners → Add a learner: name, level, curriculum/exam track. Manage several learners (siblings) from one account — the **learner switcher** (dashboard and mobile) swaps which child you're viewing so dashboards, messages and payments always have the right context.

3.2 — Find learning

- **Programmes** — structured courses by curriculum and level.
- **Cohorts** — scheduled class runs with a start date, tutor, capacity and an **enrolment window**.
- **Tutors** — public, vetted profiles with moderated reviews and ratings.
- **Saved (wishlist)** — bookmark cohorts or programmes to shortlist and compare later.
- **Recommendations** — cohorts open for enrolment, level-matched programmes and top-ranked tutors, each with a visible *"why this was suggested"* explanation.

3.3 — Enrol in a cohort, end to end

- 1 **Open the cohort** — check the timetable, tutor, seats left and price.
- 2 **Choose Enrol** and pick **which learner** the seat is for. Some cohorts use a join request that staff review and accept first.
- 3 **Checkout** — review the order and apply a coupon if you have one. Totals are computed by NUVORA, never by your browser.
- 4 **Pay** — Paystack or Flutterwave: card, bank transfer, USSD (whatever the gateway offers). Prices are in Naira (₦).

- 5 **Land on your receipt** — it updates itself when the gateway confirms; tap **Verify now** to force an immediate check if it lingers.
- 6 **Confirmed** — the seat locks in, the learner joins the roster, and confirmation plus receipt arrive by email/WhatsApp.

The rules that protect your seat (and your money)

Enrolment windows are real — cohorts open and close on published dates, and after the window the page plainly says enrolment is closed. **Unpaid checkouts expire after about 2 hours**, so an abandoned payment can't silently hold a seat. And every payment is reconciled against the gateway — you can't pay "into the void".

3.4 — Orders, coupons & your wallet

Concept	How it works
Order statuses	Pending → Paid (or Failed/Cancelled/Refunded). The receipt page always shows the current truth.
Coupons	Enter the code at checkout; the server validates it and discounts the total before you pay.
Wallet	Credits (e.g. referral rewards) collect here and apply at checkout.
Receipts	Every order has a printable receipt — order number, items, payments — under Account → Orders .

3.5 — Private tuition (one-to-one)

Private tuition → Request: subject, level, preferred schedule and goals. The team reviews and **matches a vetted tutor**; the package then proceeds to booking and payment like a cohort order, with the same escrow protection. Home-tutor requests follow the same request → match path.

3.6 — Message safely

You can message a tutor **inside the scope of a booking** (a cohort or private package) — deliberately not an open social network. See the safeguarding design in **chapter 10**.

3.7 — Track learning

Lessons & attendance

Schedule, join status, attendance marks, tutor lesson notes, recordings and transcripts when published.

Assignments

What was set, what was submitted, grades and tutor feedback under Submissions.

Progress reports

Tutor-authored summaries of how your child is doing over time.

Practice exam results

Scores and per-question review for every CBT attempt.

Certificates

Issued certificates appear under Account → Certificates once a cohort completes.

Support tickets

Raise and follow formal support requests from the help area — with a ticket trail, not just chat.

3.8 — Reviews & referrals

After learning, leave a **review** on the tutor — reviews are moderated before showing publicly, so ratings stay real. With **referrals**, share your code from **Account → Referral code**: when someone signs up with it and completes their **first paid order**, a reward lands in your wallet automatically. One reward per first paid order, and every qualified referral is listed on your referrals page with its status.

3.9 — NUVORA Plus

A premium, **advisor-led** tier: priority matching with vetted specialist tutors and a dedicated advisor — built for families who want a guided experience, including international learners. See the NUVORA Plus page or ask in chat.

Home surfaces what's next — lessons today, assignments due, exams available, messages. It's built to be opened daily, ideally on your phone.

4.1 — Join a live lesson

- 1 **Open the lesson** from **My lessons** or the cohort page.
- 2 **Tap Join inside the join window** — it opens **15 minutes before** start and stays open while the lesson runs.
- 3 **You're in** — the session opens in the built-in meeting room, right in your browser or app.

! Outside the window, Join stays closed — on purpose

The window is enforced by the platform so nobody wanders into the wrong class. If Join is greyed out, check the lesson time — and that the tutor has opened the room.

4.2 — During and after class

- **Attendance** — marked by your tutor; you (and a linked parent) can view your **attendance summary** any time.
- **Lesson notes** — tutors publish notes per lesson; add your own notes on the lesson page.
- **Recordings & transcripts** — when published, they live in **Recorded lessons** and on the lesson page. On mobile you can download recordings for **offline viewing**.
- **Resources & assignments** — materials, tasks and deadlines on the cohort pages. Submit from the assignment page; grades and feedback land under **Submissions**.
- **Progress reports** — tutor-written reports on how you're doing, readable from your dashboard. Your video **lesson progress** (how far you watched) is tracked automatically.

4.3 — Practice exams (CBT)

Real exam conditions: server-side timing, auto-saved answers, platform-marked scores.

- 1 **Open Practice / Exams** and pick a paper — UTME (JAMB), WAEC, NECO, IGCSE, A-Level or SAT.

- 2 **Start attempt** — the timer runs **server-side**, and answers save as you go.
- 3 **Submit** — the platform scores it; your device is never trusted for marks.
- 4 **Review** — every attempt stays available with score and per-question breakdown.

Crashed mid-exam or lost signal?

Stale or abandoned attempts expire automatically, so a dead battery doesn't corrupt your record or block a fresh attempt.

4.4 — Assessments vs practice exams

Tutors can also set **assessments** inside your classes — shorter, teacher-authored checks tied to a subject. Attempts and results appear alongside your practice exams, so everything gradable lives in one place.

4.5 — Messages & notifications

Chat with your tutor within active bookings, and read tutor lesson notes after class. Notifications for lessons, grades and payments arrive in-app, by push, email, SMS and WhatsApp — see **chapter 11**.

NUVORA tutors are vetted before they teach and paid weekly after escrow releases. This chapter covers the whole journey: application → approval → teaching → payout.

Teach from a structured console: schedule, attendance, notes, exams, earnings.

5.1 — Becoming a tutor: the vetting pipeline

- 1 **Profile** — basics, bio, strengths, and **bank details verified against the live bank list**: your account name is resolved against your account number before you ever earn.
- 2 **Subjects** — pick the subjects and levels you want to teach.
- 3 **Subject assessments** — timed assessments per subject, marked by the platform.
- 4 **Documents** — ID and credentials uploaded to a secure private store; every upload is **malware-scanned** on ingestion, and files are only retrievable by you and reviewers.
- 5 **Interview** — the team schedules and records an interview outcome.
- 6 **Verification → decision** — approved, held or declined, with reasons. Track every step under **Become a tutor → Status**.

i Your pipeline statuses, decoded

Draft (still your worksheet) → **Submitted** → **In review** → **Interview** → **Verification** → **Approved**. Staff can also place a profile **On hold** (something to fix), **Reject** it, or later **Suspend** an approved tutor if standards slip. Only staff control whether your profile is publicly listed.

5.2 — Availability

Set weekly **availability** plus dated **exceptions** (days off, one-off blocks) in your tutor console. Scheduling — and the double-booking guard described below — rely on it being accurate.

5.3 — Teaching toolkit

Tool	What you do with it
Schedule / My lessons	What's coming up and who's enrolled; open or refresh the meeting link when it's time (learners can only join inside the window).
Attendance & notes	Mark attendance per lesson and publish lesson notes learners and parents can read.
Recordings & transcripts	Publish recorded video and transcripts to the class library for revision and offline viewing.
Assignments	Create tasks, receive submissions, grade with feedback.
Practice exams	Author CBT papers, then monitor attempts and results per student.
Assessments	Set shorter subject checks inside your classes.
Progress reports	Write per-learner reports that parents read in their dashboards.
Messaging	Message parents/learners within your bookings — the same scope rules that protect learners protect you.

5.4 — Money: earnings & payouts

Question	Answer
When does escrow release?	On confirmed completion — and if a completion goes unconfirmed after delivery, eligible holds auto-release about 72 hours later.
When do I get paid?	Payouts run weekly to your verified bank account — automatic via Paystack Transfers where configured (a transfer OTP may be required to complete), otherwise confirmed by the finance team.
How do I know it's done?	Every payout shows its status under Earnings/Payouts , and you're notified on payment (WhatsApp/email).
Can a payout be faked?	No — in production a payout can't be recorded as paid unless a real transfer was made or verified by an admin. Fail-closed by design.

5.5 — Rescheduling & cancellations

Tutors (or staff) can **reschedule** a lesson — learners are notified automatically — or **cancel** one, which frees your calendar: the double-booking guard treats cancelled lessons as free time, so you can't be blamed for a clash you cancelled ahead of. Note that late-cancellation patterns are visible to staff in the tutor console — treat published schedules as commitments.

5.6 — Your public profile & reviews

Approved tutors get a public profile page (subjects, levels, bio, rating). Learner and parent **reviews are moderated** before they appear — genuine feedback shows; abuse doesn't. Keep your bio current and your availability honest: both directly influence matching and ranking.

NUVORA supports B2B arrangements: schools, corporate training and institution accounts with their own administrative scope.

- **Register an organisation** from the For schools / corporate training pages — institution accounts receive their own admin-scoped surface, separate from staff operations.
- **Orders & enrolments ride the same rails** as families: escrowed payments, LMS access, attendance, assignments, practice exams and reporting.
- **Admissions** — formal intake applications (apply → track status → decision) live under **Account → Admissions**.
- **Institution admins** manage their own members; NUVORA staff retain oversight for vetting and payments, so governance stays consistent.
- **Visibility** — staff consoles list institution accounts, their orders and enrolments, which makes structured programme reviews straightforward.

Partnership details

Pricing and volume arrangements are handled directly by the partnerships team — use **Contact** or the in-app chat and ask for institutions.

For NUVORA staff accounts only. Signing in requires an emailed **MFA code** before any session is issued — a staff password alone is never enough — and every privileged action is **audit-logged** with the actor, timestamp and before/after state.

Area	What staff do there
Overview & analytics	Funnel, revenue, enrolment fill rates, CBT analytics, lessons today.
Users & roles	Accounts, roles, statuses. Role grants and suspensions are restricted to the platform's owner-level staff.
Vetting queue	Review profiles, assessments and documents; interview records; approve / reject / hold / suspend tutors.
Cohorts & programmes	Create and publish, enrolment windows, tutor assignment, rosters, banners, join-request review.
Lessons	Scheduling, recorded video, attendance exports (CSV) for reporting.
Payments & payouts	Orders, manual bank-transfer confirmation, refunds, weekly payout runs (Paystack transfer + OTP completion), revenue exports.
Leads & support	Marketing leads, support tickets, the agent chat inbox with satisfaction scores and CSV export.
Content	Blog CMS (draft / scheduled / published / archived) and testimonial publish toggles — no deployment needed to change the site.
Admissions, institutions, referrals, reviews	Application decisions, B2B account oversight, referral programme list, review moderation queue.
Certificates	Issue cohort certificates and answer verification lookups.
Coupons & notifications	Create and inspect discount codes; send operational WhatsApp notices where appropriate.

Money & privileges are double-gated

High-risk operations (refunds, role grants, suspensions) are intentionally restricted, and none of them can happen invisibly — the audit log is the system of record for every change that touches money or access.

The shortest honest summary: prices are computed by the server, payments settle exactly once, money sits in escrow while teaching happens, and every status you see on a receipt is the gateway-verified truth.

Escrow: your payment is shielded until the learning you bought actually happens.

8.1 — How you pay

- **Gateways:** Paystack (primary) and Flutterwave. The methods offered come from the gateway — cards, bank transfer, USSD.
- **Currency:** Naira (₦).
- **Coupons & wallet credit** discount the **server-computed** total — NUVORA never trusts a price sent by your browser or app.
- **On mobile**, checkout opens the same secure web flow and returns you to the app — one audited payment path on every device.
- **Manual bank transfer** arrangements are possible for institutional and assisted payments: staff confirm the transfer against records, and the same reconciliation rules apply before anything marks paid.

8.2 — Escrow: the core protection

- If completion isn't confirmed after delivery, eligible holds **auto-release about 72 hours** later — the same confirm-or-3-day model used by established Nigerian tutoring platforms.
- Escrow can also move to **Refunded** (money returns to the payer) or **Disputed** (held while staff review) — both are staff-supervised states, never automatic.

Settled exactly once — by construction

Gateway notifications are verified and idempotent: a notification delivered twice (or fifty times) settles your order **exactly once**. Amount and currency are reconciled against the order before anything flips to paid.

8.3 — When confirmation is slow

Gateway callbacks occasionally lag. Your **receipt page polls** automatically, and the **Verify now** button asks the server to check the gateway directly through the same protected path. You can also just close the tab — settlement doesn't depend on keeping any page open, and email/WhatsApp confirmations follow regardless.

8.4 — Receipts & orders

Everything under **Account → Orders**: order number, line items, payment attempts, status and printable receipts — deep-linkable from web and mobile, and the reference support will ask for.

8.5 — Refunds

- Start one from support (in-app chat / support@nuvora.com) with your **order number**.
- On approval, NUVORA **attempts the gateway refund first** and only marks the order refunded after the gateway confirms — and in production, refunds are impossible without a configured gateway secret. Fail-closed, not best-effort.
- Related hygiene: cancelled lessons free the tutor calendar, expired unpaid enrolments release seats automatically, and coupon/referral discounts are reconciled at order time.

8.6 — If something looks wrong

What you see	What to do
"I paid but the site says pending"	Open the receipt → Verify now . Still pending? Chat support with the order number — staff can reconcile manually. You will not be double-charged.
A second debit alert from your bank	Gateways sometimes send provisional alerts; NUVORA settles each order exactly once. Genuine duplicates are reversed through the refund path.
Payment page closed mid-flow	Safe: the unpaid reservation expires (~2 hours), the seat frees up, and you can re-checkout while seats and the window remain.
Failed payment but bank shows a hold	That's a gateway/bank authorisation hold, not a settled charge — it releases per your bank's policy; support can confirm the order never settled.

- Complete an eligible cohort and staff issue your **certificate** — find it under **Account → Certificates**, printable and shareable.
- Each certificate carries a **public verification link**: schools and employers can confirm it's genuine at the verify page **without an account** — they see the programme, learner name, completion details and issue date exactly as recorded.
- Certificates you earn stay attached to your account even after a cohort ends; exports of your data include them.

**Sharing tip**

Send the verification link with applications — it proves authenticity better than a screenshot ever can.

NUVORA teaches children, so the platform is built around that fact — not around growth hacks. These are structural rules, enforced by the software itself.

Linked minors

Learners under 17 enrol only when linked to a parent or guardian, who oversees enrolments, payments and messaging.

Booking-scoped messaging

Learners and tutors message inside a class or booking context. There is no open stranger-to-child DM system.

Vetted tutors only

Assessments, documents, interview, ongoing review — and immediate suspension powers when standards slip.

Privacy by default

Personal contact details aren't exposed between parties. Export or delete your data any time (chapter 14).

Secure documents

Vetting documents live in private storage, retrievable only by their owner and reviewers; uploads are malware-scanned.

Audited staff access

Staff sign-in requires emailed MFA, and every privileged action is written to an audit log.

Payments privacy

Your card is never exposed to NUVORA — the gateways process it. NUVORA stores references and reconciliation data, never card numbers.

Report a concern

In-app chat → "human" gets you a person fast, or email support@nuvora.com. Safeguarding concerns go straight to the front of the queue.

Channel	What arrives there
In-app bell	Everything: lessons, grades, payments, messages. Unread counts sync across web and mobile; read-all is available.
Push (mobile)	Time-sensitive learning events. Devices register under Account → Devices ; signing out removes your device so alerts stop following an old phone.
Email	Receipts, verification, a short welcome series after sign-up, reminders and summaries.
SMS	Time-sensitive notices where enabled.
WhatsApp	Payout confirmations, payment reminders and similar — with an automatic email fallback if a WhatsApp send fails.

Nudges, not noise

Payment reminders are deliberately restrained — they go out only inside a defined window (roughly 45 minutes to 24 hours after an abandoned checkout) and then stop. Welcome emails trail off too; nobody at NUVORA is paid by the email.

The chat bubble (web) / Chat tab (mobile) opens the **NUVORA assistant**. It's genuinely useful for platform questions – and deliberately powerless for anything sensitive.

It can	It cannot
Answer questions about accounts, enrolment, escrow, lessons, joining, becoming a tutor, and safeguarding — grounded in NUVORA's own knowledge	Move money, issue refunds, change your account, or see your card details
Point you to the exact page for your task	Act outside its knowledge — it says so and offers a human
Hand you to the agent inbox — say "human" — and a person replies in the same thread	Pretend to be a human or handle safeguarding cases alone

- **Rate the conversation** afterwards — ratings feed support quality analytics.
- **Your messages are scrubbed of sensitive details** (card numbers, OTPs) before the assistant reads them.
- Conversations persist as threads, so you never have to re-explain.

Never a dead end

If the assistant is briefly unavailable or its daily budget is exhausted, you get an immediate "a human from the NUVORA team will pick this up shortly" handoff — the chat never just breaks.

The daily surface: lessons, messages, exams and notifications in your pocket.

13.1 — Install & keep current

- **Android:** install the signed APK from the official download page (or the store listing where available). The app receives **over-the-air updates on launch**, so fixes arrive without a store round-trip.
- **iOS:** via the official listing/TestFlight where available.
- **Deep links:** nuvora.com links open straight into the app when installed (cohort pages, receipts, chats).

13.2 — Getting around

Primary tabs: **Home · Learning · Messages · Notifications · Account**. Cohorts, practice exams, saved items, referrals, the tutor console and (for staff) the staff console hang off those. Parents get the **learner switcher**; everyone gets a dark/light **theme toggle** in the header; motion respects reduced-motion settings.

13.3 — Offline & low networks

- A clear **offline screen** tells you when there's no connection — retry once you're back.
- **Recorded lessons download for offline viewing** from the lesson or recorded library — designed for commutes and data-saving.
- Live updates use a light "new content" signal; if it drops, the app falls back to periodic refresh — **messages are never lost**.

13.4 — Payments on mobile

Purchases open the secure web checkout and return you to the app when done — deliberate, so money flows through the same verified path on every device.

13.5 — Sign-in & security on mobile

- Email + password, email code, or Google. Sessions live in the **device keychain** (OS-secured storage), not plain app storage.
- If your session expires you're routed to sign-in — and only then; browsing public screens never silently logs you out.

- Manage or remove signed-in devices any time under **Account → Devices**.

Action	Where / what happens
Edit profile & photo	Account → Profile. Avatars and uploads are size-limited and scanned before storage.
Manage devices	Account → Devices — see and remove signed-in mobile devices; removals stop push notifications to that device.
Upload files	Learning resources and documents upload within clear size limits (avatars ~10 MB, learning resources ~25 MB) and are checked for malware.
Export your data	Account → Export — a download of the data NUVORA holds on you.
Delete your account	Account → Delete. Permanent: personal data is removed; audited financial records are retained only as legally required.
Security basics	Passwords bcrypt-hashed; sessions revocable; password change revokes all sessions; staff actions audited.
Analytics	Aggregate and privacy-friendly (no advertising trackers, no personal data in events).

Problem	Fix
No verification email	Spam folder → Resend verification → still nothing: use Email me a sign-in code (also activates a pending account), or contact support.
Locked out of sign-in	Too many attempts — wait a few minutes; the cooldown lifts automatically.
Payment stuck "pending"	Receipt page → Verify now ; check your bank app; then chat with support quoting the order number.
Can't join a lesson	Join opens ~15 minutes before start; confirm the schedule; the tutor opens the room — message them in the class thread if it's time and the door is still closed.
Checkout lost my seat	Unpaid reservations expire (~2 hours). Re-checkout while the window and seats remain.
Coupon rejected	Codes are validated server-side at checkout — check spelling/expiry; expired or ineligible codes decline with a message, no charge is made.
Referral hasn't credited	Rewards land when the referred person completes their first paid order — check the status on your referrals page; qualifying orders trigger it automatically.
Recording not visible	Recordings appear after your tutor publishes them; if a lesson ended a while ago, ask in the class thread.
Exam timer looks wrong	The clock is server-side — refresh and reopen the attempt; your saved answers persist.
App says I'm offline	Check connection, try again; force-close and reopen if needed. Downloads remain watchable offline.
Push not arriving	Account → Devices: re-register the device; check the OS notification permission for the app.
Google sign-in fails	Allow pop-ups/redirects for nuvora.com, or use email + password / email code instead.
Tutor: payout pending	Payouts run weekly. Check bank details are verified; watch for a transfer OTP step; ask support with the payout ID if it outlasts the cycle.
Tutor: WhatsApp confirmation missing	Check your email — that's the automatic fallback channel — then verify your WhatsApp number in your profile.
My tutor review isn't public	Reviews publish after moderation — that's what keeps the ratings trustworthy.
Something else entirely	Chat → <i>"human"</i> , or email support@nuvora.com with screenshots and any order/lesson IDs.

Is NUVORA a school?

It runs school-grade structures — curricula, cohorts, assessments, progress reports, certificates — delivered by vetted tutors. Formal accreditation tracks are on the roadmap (see Admissions).

Who can teach?

Anyone may *apply*. Only candidates who pass subject assessments, document checks and interview can *teach*.

When do tutors get paid?

Funds sit in escrow while teaching is delivered, then release (automatically ~72h after delivery if unconfirmed) into the weekly payout run.

Can I get a refund?

Approved refunds route back through the original gateway. Open a support chat with your order number to start one.

Which exams are supported?

UTME (JAMB), WASSCE (WAEC), SSCE (NECO), IGCSE, A-Level and SAT — plus GRE/GMAT preparation tracks, each with per-exam topic coverage.

Which curricula?

Nigerian and British, with level and subject mapping across the catalogue.

Can one person be tutor and parent?

Yes — one account can hold multiple roles. A teacher can enrol their own child without a second account.

What happens if a tutor cancels a lesson?

You're notified automatically; the lesson frees the slot and can be rescheduled. Repeated cancellations are visible to staff and handled in the tutor review process.

Can I retake a practice exam?

Attempts are retained and reviewable — so you can start fresh attempts and compare scores over time.

Does the AI tutor my child?

No. The AI only handles *support* questions and hands off to humans. All teaching is by vetted human tutors.

Is my child's data sold or used for ads?

No advertising trackers; analytics are aggregate and privacy-friendly. Export or delete your data any time (chapter 14).

Can I use NUVORA outside Nigeria?

Yes — it serves Nigerian and British curriculum families anywhere (NUVORA Plus is built with international learners in mind). Payments settle in Naira.

Is there a free trial?

Promotions vary by cohort — watch the pricing page, coupons and the referral programme.

How fast is tutor matching for private tuition?

Requests are reviewed by a person, not queued to a bot — the team matches based on subject, level, schedule and your stated goals, then confirms with you before any payment.

Term	Meaning
Cohort	A scheduled run of a programme with a tutor, seats and an enrolment window
Programme	A structured course defined by curriculum, level and subject
Escrow	Your payment held safely and released as learning is delivered (~72h auto-release if unconfirmed)
Vetting	The multi-stage tutor approval pipeline: assessments → documents → interview → decision
CBT	Computer-based testing — timed practice exams marked by the platform
LMS	Learning management: lessons, resources, assignments, submissions, progress
Join window	The window (opening ~15 minutes before start) in which a live lesson link works
Enrolment window	The published dates during which a cohort accepts learners
Wallet	Your NUVORA credit balance (e.g., referral rewards), applied at checkout
Learner	A student profile — especially one managed by a parent/guardian
Join request	A cohort enrolment that staff review and accept before payment completes
Order / Receipt	The record of a purchase and its proof of payment
Assessment	A tutor-authored, subject-scoped check inside a class — shorter than a practice exam
Progress report	A tutor-written summary of a learner's development over time
NUVORA Plus	Premium, advisor-led matching tier
MFA	Multi-factor authentication — an emailed code required for staff sign-in
CSAT	The satisfaction rating you give a support conversation
Verify now	The receipt-page button that checks your payment directly with the gateway
OTA update	Over-the-air app update delivered on launch, without a store download

You're set.

One rule of thumb if you remember nothing else: **your money is safe until your learning happens** — and the chat bubble on any screen gets you a person whenever you need one.

SUPPORT	support@nuvora.com — or in-app chat → “human”
WEB	nuvora.com
MOBILE	NUVORA app (Android & iOS) — search or use the download page
SAFEGUARDING	Report from the chat or email — handled first, always
